# The Website

---

This is the project for an electronic music label, the main objective is to gather all the information regarding the events of the party.

Admin will be able to add posts and manage other accounts, while regular users, upon a registration through the website, will be allowed to comment the admin's post.

In the event post the admins will have to fill all the details relevant to the specific party.

# FRONT END

---

## General Design

The general style of the website will remain quite simple and minimal.

The focus will stay in the content

The design will stay in black and white and the main colours will be brought by high quality images of event's flyers

# Home Page

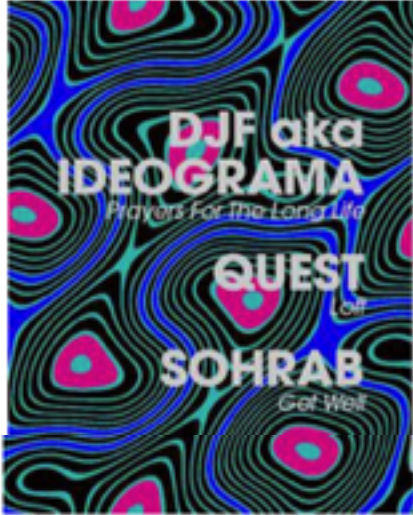

The Home page will present a showcase of all the events submitted by the admin, from the last added.

The space will be organised in three columns, with the event's image, all the details

Events

**UNDERSOUND #26**

After months in the making, we have finally invited Madrid based artist DJF Aka Ideograma to play at our party. Whilst the music heads will know him for his amazing production skills and releases on labels such as Semantica Records. Ideograma is also an amazing dj with more than 20 years of experience. Since his debut in 1992 he has never stopped delighting audiences with his talent, good taste and ability to do magic on the decks. Quest is one of the most talented young djs we have come across on our journey. He has exceptional music taste, solid mixing skills, and a very positive personality. It is a rarity to come across a dj that is so young but so confident on the decks at the same time. We are very happy to welcome him to our party. Sohrab is steadily becoming a regular at our events, he is a skilled selector with great technique and one of our local favourites, and it's always a pleasure to have him with us. See you on the dancefloor!

**When :** 0012-12-12  
**Where :** The Dance Tunnel, Madrid  
**Line Up :** DJ F | QUEST | SOHRAB

**REIBU レイブ**

A new vibrant italian Party is growing in Milan keeping throwing amazing parties with names from all Europe. This Saturday Reibu in the box meets Undersound to delight the italian audience with the talent of our Resident Harry McCanna.

**When :** 1212-03-21  
**Where :** The Flat 5, London  
**Line Up :** HARRY MCCANNA | ENRICO VIVALDI

**CARTULIS VA**

CARTULIS Sunday VA consists on showcasing djs around the music we believe in and with that deliver to the dance floor the biggest variety on house and techno with all their sub genres. The night will consist in extended sets from all the ones involved in the line up and give the opportunity to each artist to develop their set into a journey. You will be able to really know what each of them are all about. The Pickle Factory is an intimate venue with what is most important, a warm, clear and loud sound system. Well, that's all, simple but with good intention. We see you at The Pickle Factory.

**When :** 1233-03-21  
**Where :** Robert Johnson  
**Line Up :** ??? | ??? | ???

## Harry' Showcase

Born in 1967 in Mexico City, Harry is the leading Mexican artist of the generation that emerged in the wake of the influence of Gabriel Orozco and Francis Alÿs. Ortega studied with Orozco in the informal studio class established in the older artist's atelier in the late 1980s. There, he absorbed the acute attention to form associated with Orozco's sculpture and photography, subsequently refining his own visual and conceptual vocabulary that emerged through his focus on the points of intersection between architecture, sculpture, and spatial analysis. Harry's work can be found in myriad of public and private art collections both in the United States and abroad, and has been seen in numerous exhibitions worldwide. He currently lives and works in Berlin, Germany, and Mexico City.

**When :** 3123-12-23  
**Where :** The Red Box, London  
**Line Up :** HARRY MCCANNA | ENRICO VIVALDI

- JavaScript
- PHP
- MySQLi

# Database

login_system_undersound user
user_id : int(10)
firstname : varchar(100)
lastname : varchar(100)
password : varchar(200)
email : varchar(100)
activation : varchar(40)

login_system_undersound account
user_id : int(10)
username : varchar(100)
profilepic : varchar(50)
status : varchar(10)
banned : varchar(3)

login_system_undersound post
post_id : int(10)
# user_id : int(10)
title : varchar(100)
postpic : varchar(100)
content : varchar(10000)
data : varchar(10)
venue : varchar(100)
lineup : varchar(100)

login_system_undersound comment
comment_id : int(10)
# post_id : int(10)
# user_id : int(10)
comment : text
date : timestamp

# user

---

-user\_id (primary key)-> Auto-generated, scaling

Main index of the website, used in most of the sql to track other columns.

-first name, last name, email ->

Input by user through a registration form

-password -> Input by user through a registration form, inserted into DB with a sha1()

-activation -> auto-generated, grants the login only is in the database is set to NULL.

	login_system_undersound	user
🔑	user_id	: int(10)
📋	firstname	: varchar(100)
📋	lastname	: varchar(100)
📋	password	: varchar(200)
📋	email	: varchar(100)
📋	activation	: varchar(40)

# activation

---

Upon registration, an email is sent to the user with this link:

```
<a href="'.WEBSITE_URL . "/email_activation.php?email=" . urlencode($email) .  
'&key=$activation '>Click Here</a>
```

\$email = Set by the user in the registration form

\$activation = Random generated

When the user visits email\_activation.php a \$\_GET variable takes both query\_string

With a sql it checks if at that specific email is assigned that specific activation key, if so, activation is set to NULL.

# account

---

`user_id` -> derivate from 'user'

`username`, `profilepic` -> set by the user  
with forms

`status` -> set NULL by default

`banned` -> set NO by default

	login_system_undersound account
🔑	<code>user_id : int(10)</code>
📄	<code>username : varchar(100)</code>
📄	<code>profilepic : varchar(50)</code>
📄	<code>status : varchar(10)</code>
📄	<code>banned : varchar(3)</code>

# profilepic

---

The file is uploaded with a form and moved to the assets folder:

```
$move_file = move_uploaded_file($file_tmp_location, $file_path);
```

```
$file_path = assets/$file_name
```

```
$file_tmp_location = assets folder
```

The sql saves in the database the path to get to it:

```
$sql = "UPDATE account set profilepic = '$file_path' where user_id = '$user_id'";
```

```
$file_path = set with a $_FILES var, inserted by user with a form, input type='file'
```

```
$user_id = set by $_SESSION['user_id']
```

# status

---

It can be set to NULL or admin, only admin can change this row in 'new\_admin.php'

```
if($status != 'admin'){
```

```
$sql= "UPDATE account set status = 'admin' where user_id = '$user_id'";}
```

```
if($status = 'admin'){
```

```
$sql= "UPDATE account set status = " where user_id = '$user_id'";}
```

```
$user_id = from a $_GET var
```

An user with banned=YES cannot be admin

```
if($banned == 'yes'){
```

```
    echo " A banned user cannot be admin , <a href='$previous'>GO BACK</a>";
```

# banned

---

It can be set to YES or NO, only admin can change this row in 'ban\_user.php'

```
if($banned = 'NO'){
```

```
$sql= "UPDATE account set banned = 'YES' where user_id = '$user_id'";}
```

```
if($banned = 'YES'){
```

```
$sql= "UPDATE account set banned = 'NO' where user_id = '$user_id'";}
```

```
$user_id = from a $_GET var
```

An user with status=admin cannot be banned

```
if($status == 'admin'){
```

```
    echo " An admin cant be banned , <a href='$previous'>GO BACK</a>";
```

# admin\_check.php

---

ban\_user.php and new\_admin.php can be accessed only after the admin\_check.php

```
if(!$_SESSION){  
    header('location:index.php');  
}else{  
    if(!$_SESSION['status']){  
        header('location:index.php');  
    }  
}
```

If the user is not logged in or not an admin, it heads to index.php

# post

---

post\_id-> Auto-generated, scaling

user\_id -> derivate from 'user'

title, content, data, venue, lineup, postpic

-> set by the user with forms

post pic \* same mechanics of profilepic

	login_system_undersound	post
🔑	post_id	: int(10)
#	user_id	: int(10)
📄	title	: varchar(100)
📄	postpic	: varchar(100)
📄	content	: varchar(10000)
📄	data	: varchar(10)
📄	venue	: varchar(100)
📄	lineup	: varchar(100)

# comment

---

`comment_id`-> Auto-generated, scaling

`post_id`-> derivate from 'post'

`user_id` -> derivate from 'user'

`comment`-> set by the user with forms

`date`-> Auto-generated

	login_system_undersound	comment
	<code>comment_id</code>	<code>int(10)</code>
	<code>post_id</code>	<code>int(10)</code>
	<code>user_id</code>	<code>int(10)</code>
	<code>comment</code>	<code>text</code>
	<code>date</code>	<code>timestamp</code>

# delete\_process.php

---

Admin and Authors can delete post or comments

Next to posts and comments there is an image with anchor in it, the link sends to the same post page but with a query string, different for post or comment

```
<a href='blog_post.php?post_id=$post_id&delete_post=$post_id' ><img></a>
```

```
<a href='blog_post.php?post_id=$post_id&delete_comment=$comment_id'><img></a>
```

The post page then recalls the PHP delete\_process.php:

```
If isset($_GET['delete_post']) - > The post and all his comments are deleted
```

```
If isset($_GET['delete_comment']) - > The comment is deleted
```

`$delete_post`

```
$sql = "DELETE FROM post WHERE post_id='$delete_post';
```

```
    $result = mysqli_query($conn,$sql);
```

```
$sql = "DELETE FROM comment WHERE post_id='$delete_post';
```

```
    $result = mysqli_query($conn,$sql);
```

`$delete_comment`

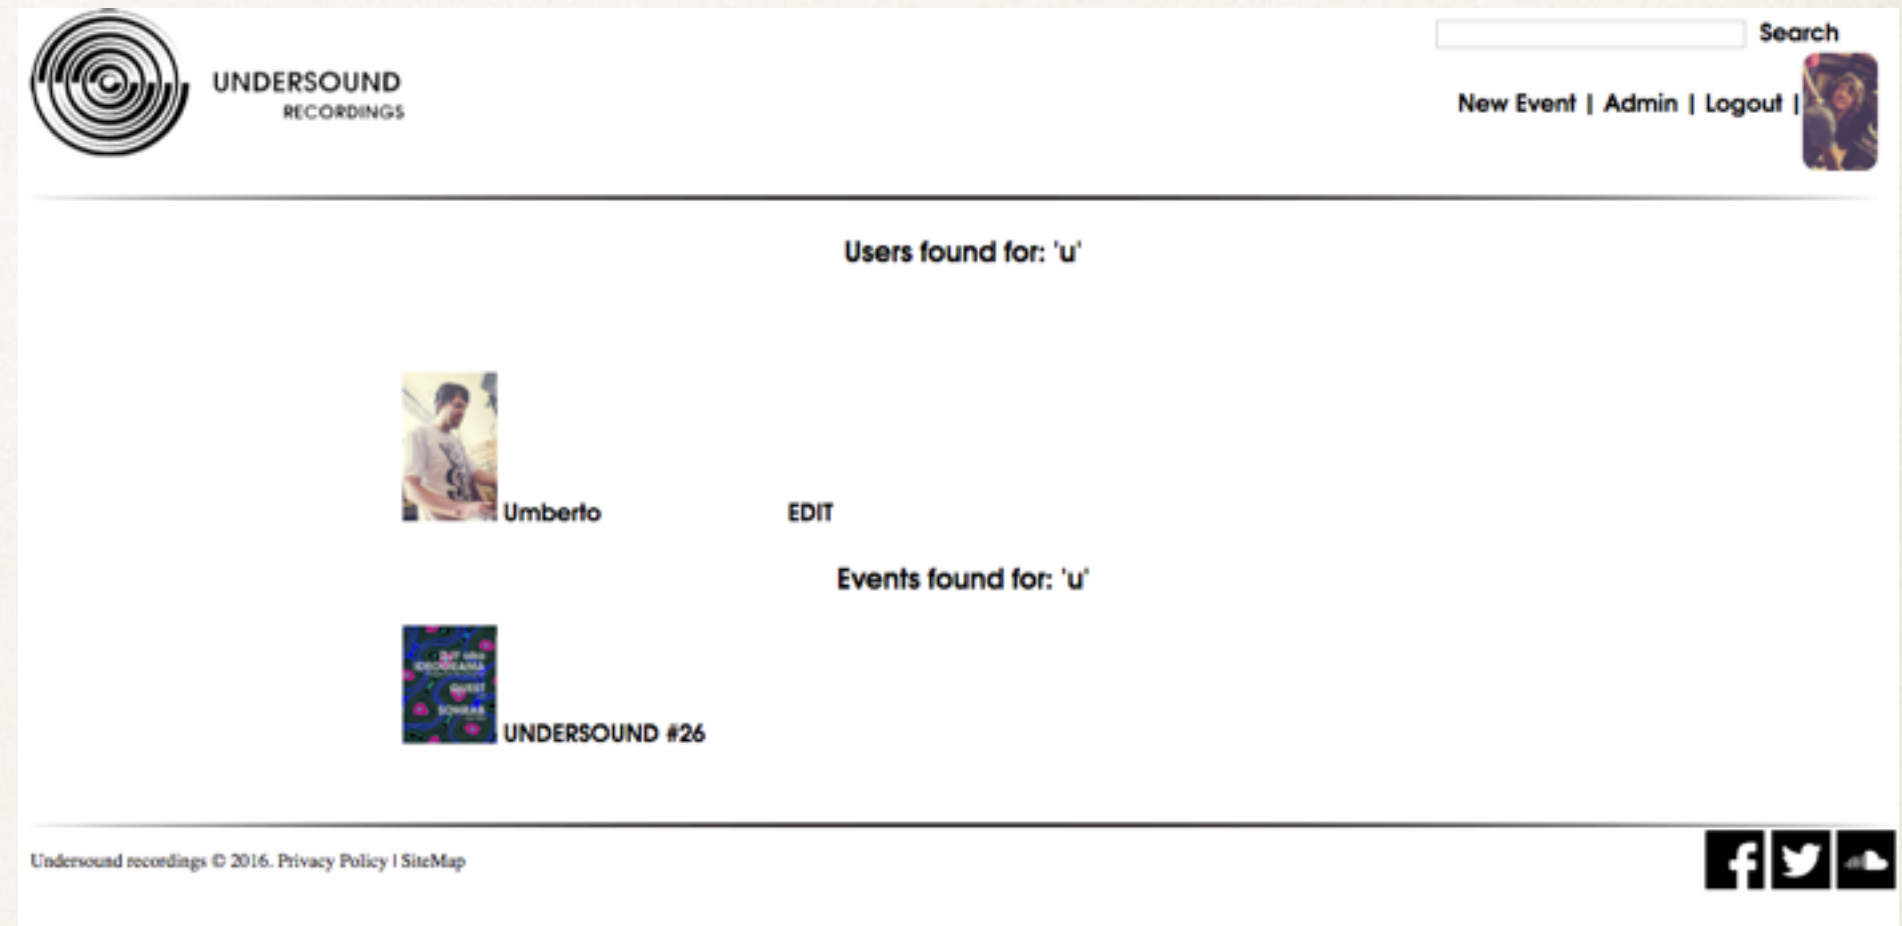

```
$sql = "DELETE FROM comment WHERE comment_id='$delete_comment';
```

```
    $result = mysqli_query($conn,$sql);
```

# SEARCH

All the users will be able to search between all the accounts and the events with key word input by a simple type form

The screenshot displays the Undersound Recordings website's search functionality. At the top left is the logo, a stylized spiral, followed by the text "UNDERSOUND RECORDINGS". To the right is a search bar with the placeholder text "Search" and a magnifying glass icon. Below the search bar are links for "New Event | Admin | Logout |" and a small profile picture. The main content area shows the results of a search for the letter 'u'. Under the heading "Users found for: 'u'", there is a list of users. The first user is "Umberto", accompanied by a small profile picture and an "EDIT" link. Below this, under the heading "Events found for: 'u'", there is a list of events. The first event is "UNDERSOUND #26", accompanied by a small event image. At the bottom of the page, there is a footer with the text "Undersound recordings © 2016. Privacy Policy | SiteMap" and social media icons for Facebook, Twitter, and YouTube.

# search.php

---

Submitting the search form, sends to the page search.php with a query starting where the search key is the value of the input.

```
$search = $_POST['search'];
```

```
header('Location: http://localhost/undersound/search.php?value='.$search);
```

With a sql, the php finds all the usernames in 'account' and all the titles in 'post', similar to the var \$search, takes from the \$\_GET

```
$sql = "select * from account where username LIKE '%{$search}%' ";
```

```
$result = mysqli_query($conn, $sql);
```

```
$sql = "select * from post where title LIKE '%{$search}%' ";
```

```
$result = mysqli_query($conn, $sql);
```
